

IN THE CLAIMS:

Please cancel claims 188-196 without prejudice, and amend claims 197-199 as follows:

149-196.(Cancelled)

1
1 197. (Currently Amended) A color filter (CF) substrate comprising:
2 a color filter formed on the color filter (CF) substrate;
3 a transparent electrode formed on said color filter; and
4 protrusions formed on said transparent electrode, said protrusions being formed
5 of dielectric materials,
6 wherein each of said protrusions extends in one direction and is bent in a
7 zigzag shape at an interval of a predetermined cycle,
8 wherein said protrusions are arranged in parallel to one another with a
9 predetermined pitch, and
10 ~~A color filter (CF) substrate according to claim 191,~~ wherein said
11 predetermined cycle is equal to an arranging pitch of pixels in a direction in which a longer
12 edge of each pixel extends.

1 198. (Currently Amended) A color filter (CF) substrate comprising:
2 a color filter formed on the color filter (CF) substrate;

3 a transparent electrode formed on said color filter; and
4 protrusions formed on said transparent electrode, said protrusions being formed
5 of dielectric materials,
6 wherein each of said protrusions extends in one direction and is bent in a
7 zigzag shape at an interval of a predetermined cycle,
8 wherein said protrusions are formed of photosensitive resist,
9 wherein said protrusions are arranged in parallel to one another with a
10 predetermined pitch, and
11 ~~A color filter (CF) substrate according to claim 192,~~ wherein said
12 predetermined cycle is equal to an arranging pitch of pixels in a direction in which a longer
13 edge of each pixel extends.

1 199. (Currently Amended) A color filter (CF) substrate comprising:
2 a color filter formed on the color filter (CF) substrate;
3 a transparent electrode formed on said color filter; and
4 protrusions formed on said transparent electrode, said protrusions being formed
5 of dielectric materials,
6 wherein each of said protrusions extends in one direction and is bent in a
7 zigzag shape at an interval of a predetermined cycle,
8 wherein said protrusions are formed of photosensitive resist,

9 wherein said photosensitive resist is a positive type,

10 wherein said protrusions are arranged in parallel to one another with a

11 predetermined pitch, and

12 ~~A color filter (CF) substrate according to claim 193,~~ wherein said

13 predetermined cycle is equal to an arranging pitch of pixels in a direction in which a longer

14 edge of each pixel extends.
